FIRST PORTFOLIO (frozen, buy-and-hold): \$100,008 (+0.01% since 2026-07-06)

LIVE OROS BOOK (evolving, chained daily returns): \$105,160 (+5.16% over 25 trading day)

SPY (same \$100,000 from the 07/06 close): \$102,926 (+2.93%)

Method, for honest comparison: all three start at the same \$100,000 on 2026-07-06.
The First Portfolio is frozen — buy-and-hold at the journaled entries, cash earns 0%.
The Live book rebuilds daily, so its cumulative value chains each day's return of the book actually held that day (the chain only appends; nothing is restated).
Simulated money throughout. Educational, not financial advice.

Growth of \$100,000 — this book vs index & mutual funds

Series	Total return %	CAGR %	Max drawdown %	Beta vs SPY	Ends at \$
Portfolio	17.7	19.83	-6.47	0.66	117696
SPY	19.1	21.42	-8.88	1.0	119104
QQQ	25.79	29.01	-11.96	1.38	125787
VTI	19.93	22.35	-8.92	1.01	119930
VTSAX	20.07	22.51	-8.92	1.02	120067
FXAIX	19.35	21.7	-8.89	1.0	119350

Hypothetical: today's weights held for the whole window; cash earns 0%. 227 common trading days. A backtest of today's weights, not the forward record. If the ETF track note: plain sector/index/commodity funds are valid picks in their own right (often the safer expression of a signal); leveraged and inverse products are e leverage makes their charts measure arithmetic, not accumulation.

The agents behind this report

OROS is a team of specialist agents, not one program. Each has one job and hands its output to the next - the same trace is journaled with every build, so each decision is auditable.

DataAgent – universe & data

495 candidate names (benchmarks removed)

RegimeAgent – market regime

regime = BULL

RouterAgent – strategy mandate weights

base weights: sepa 22%, canslim 18%, weinstein 17%

A retrieval (RAG) system over OROS's strategy library – the published methods of Stan Weinstein, Mark Minervini, William O'Neil, Benjamin Graham, and Peter Lynch – weighting each author's playbook for the current market regime.

MemoryAgent – experience-weighted tilt

boosted weinstein x1.00, sepa x1.00

ConstructionAgent – strategy ensemble + sizing

12 holdings, 60% invested, 8 strategies

RiskAgent – post-construction risk

within limits; cash 40%

ResearchAgent – deep-dive on the #1 pick

A classifier routes the day's top pick to one of 18 industry specialist agents (REIT, Bank, Biotech, Semiconductors, Software, AI Compute, Energy, Utilities, Insurance, Defense, Industrials, Pharma/MedDevice, Consumer, Healthcare, Infrastructure, Tech, Fund, Generic), supported by a Chartist and a Sentiment Analyst. Each specializes in abstracting what matters in its industry from the company's SEC filings, and writes the attached memo with every claim cited to its source.

Guardrail: no agent can place a trade. The whole team proposes and journals only.

How to read this report

WHAT OROS IS

Software that studies the US stock market every day, proposes a practice portfolio, and emails this report. Its end goal: maximize risk-adjusted gains through market analysis by a team of AI agents, while publishing its honest numbers even when they argue against it. It never trades and never touches real money. Everything here is simulated practice.

MARKET REGIME (page 1)

The overall health check. SPY is a fund that tracks the S&P 500, the 500 largest US companies - we use it as 'the market'. If SPY sits above its own 30-week average price and that average is rising, conditions are healthy (BULL). VIX is the market's fear gauge - it measures how much turbulence investors expect. When fear spikes, OROS gets more cautious even inside a healthy trend.

THE 30-WEEK MA (moving average)

The average price over the past 30 weeks - a slow trend line. Above a rising line = uptrend. It also serves as the safety-net level: a weekly close below it is the signal to get out.

STOP

A pre-chosen exit price under every position. It caps how much any single idea can lose. Stops only ever move UP, never down.

RISK WALLET

The worst-case total loss if every position hit its exit at once. Hard-capped at 6% of the account: once the wallet is spent, OROS stops buying, no matter how good the next signal looks.

OROS AGENTIC INTELLIGENCE (the self-reflection layer)

OROS grades its own past decisions and changes its behavior based on the result. It checks its recent report card before sizing new positions: when its picks have been losing money, it automatically bets smaller (three-quarter, half, then quarter size) and must win its way back to full size. The same layer picks which strategy to trust (only ones that have made money forward) and tilts strategy weights toward what worked in similar past market conditions.

EXPECTANCY (the scoreboard)

The average money made or lost per position, counting wins AND losses. Positive = the approach makes money over time. We publish it even when it is negative - especially when it is negative.

MY HOLDINGS (your real book)

The owner can register their actual brokerage positions and OROS watches them daily with the same discipline as its own paper book: every position gets a stop, stops only ratchet up, and the actions
